

# New for 2015

## robocrop inrow bio weeder

The new eco-efficient model available for single bed application of up to 6 rows salad crops.

Featuring...

- The same robust rotary weeding system as the Robocrop InRow Classic
- Same precise disc steer system as the classic
- High speed rotary action causes minimum soil spatter and low crop contamination.
- Enhanced image analysis.
- Rear mounted to any cat 2 tractor linkage
- Operates from the tractor hydraulic system
- Excellent visibility of the weeding operation from the tractor seat.
- Precise height control for exact weeding precision.
- Tough enough for heavy land situations.
- Optional spot applicator/drencher

Prices including levelling system and mechanical centralising and based on the New console so no implement computer. Disc steer units have been brought forwards to reduce the amount of weight overhang and so allow use with smaller tractors.
