Risks can be reduced by:

- using sprayers with horizontally folding booms
- taking care not to damage poles and stays
- making sure machinery can operate safely near any overhead lines
- fitting shorter radio aerials to high machines so they cannot cause danger
- carrying irrigation pipes horizontally using two people and not storing pipes near power lines

EMERGENCY ACTION IN THE EVENT OF AN ACCIDENT

- Never touch an overhead line even if it has been brought down by machinery, or has fallen never assume lines are dead
- When a machine is in contact with an overhead line electrocution is possible if anyone touches both the machine and the ground
- If you need to get out to summon help or because of fire, jump out without touching any wires or the machine keep away
- Get the electricity company to disconnect the supply. Even if the line appears dead, do not touch automatic switching may reconnect the power.

SAFETY

INTRODUCTION

Stanhay follows the general safety standards specified by the American Society of Agricultural Engineers (ASAE) and the Occupational Safety and Health Administration (OSHA). Anyone who will be operating and/or maintaining a Stanhay precision seeder must read and clearly understand all safety, preparation, operating and maintenance information presented in this manual.

Do not operate or allow anyone else to operate this equipment until such information has been reviewed. Annually review this information before the season start-up. Call your Stanhay dealer or distributor if you need assistance, information or additional copies of manuals.

Make these periodic reviews of SAFETY and OPERATION a standard practice for all of your equipment. Be aware that an untrained operator is unqualified to operate this machine.

A sign-off form is provided (Sheet S6) for your record keeping to show that all personnel who will be working with the equipment have read and understand the information in the operator's manual and have been instructed in the operation of the equipment.

SAFETY IS YOUR RESPONSIBILITY

YOU are responsible for the SAFE operation and maintenance of your Stanhay precision seeder. YOU must ensure that you and anyone else who is going to operate, maintain or work around the seeder be familiar with the operating and maintenance procedures and related SAFETY information contained in this manual.

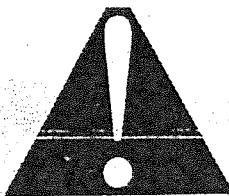

Remember, YOU are the key to safety. Good safety practices not only protect you but also the people around you. Make these practices a working part of your safety program. Be careful that EVERYONE operating this equipment is familiar with recommended operating and maintenance procedures and follows all the safety precautions. Most accidents can be prevented. Do not risk injury or death by ignoring good safety practice.

- Stanhay precision seeder owners must give OPERATING INSTRUCTIONS to operators or employees before allowing them to operate the machine, and at least ANNUALLY thereafter per OSHA (Occupational Safety and Health Administration) regulation 1928.57.
- The most important safety device on this equipment is a SAFE OPERATOR. It is the operator's responsibility to read and understand ALL safety and operating instructions in the manual and to follow these. All accidents can be avoided.
- A person who has not read and understood all operating and safety instructions is not qualified to operate the machine. An untrained operator exposes himself and bystanders to possible serious injury or death.
- Do not modify the equipment. Unauthorized modification may impair the function and/or safety and could affect the life of the equipment.

Think SAFETY! Work SAFELY!

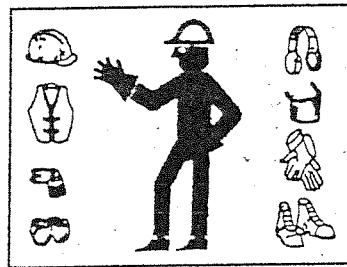

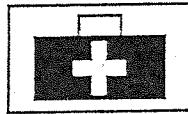

READ and FOLLOW ALL SAFETY INSTRUCTIONS

GENERAL SAFETY

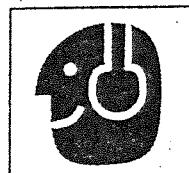

1. Read and understand the Operators manual and all safety signs before operating, maintaining, adjusting or unplugging the precision seeder.
2. Have a first aid kit available for use should the need arise and know how to use it.
3. Have a fire extinguisher available for use should the need arise and know how to use it.
4. Wear the appropriate protective gear.
This list includes but is not limited to:

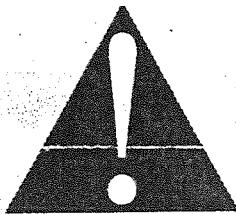

A hard hat
Protective clothing
Heavy gloves
Respirator mask
Protective shoes with slip resistant soles
Protective goggles, glasses or face shield

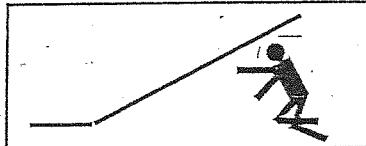

5. Wear suitable ear protection for prolonged exposure to excessive noise.
6. Install and secure all guards before starting.
7. Clear the area of people, especially small children before starting.
8. Do not allow riders.
9. Place all controls in neutral stop tractor engine, set park brake, remove ignition key and wait for all moving parts to stop before servicing, adjusting, repairing or unplugging.
10. Review safety related items annually with all personnel who will be operating or maintaining the seeder.

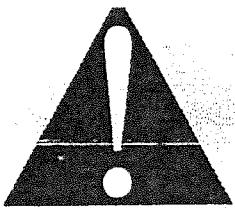

OPERATING SAFETY

1. Read and understand the operator's manual and all safety signs before preparing, operating, servicing, adjusting, repairing or unplugging.
2. Install and secure all guards and shields before starting or operating.
3. Where tractor power take-off is used, do not operate without all driveline, tractor and equipment shields in place; drivelines securely attached at both ends, and driveline shields that turn freely on driveline.

4. Clear the area of bystanders, especially small children before starting.
5. Never start or operate machine unless sitting on tractor seat.
6. Place all tractor and machine controls in neutral before starting.
7. Stay away from PTO shaft and machine when engaging PTO. Keep others away.
8. Do not allow riders and do not stand or climb on machine when operating.
9. Keep hands, feet, hair and clothing away from moving parts.
10. Do not put hands or feet under machine while tractor engine is running.
11. Make sure nobody is near the machine when operating hydraulic equipment such as markers or folding wings.

12. Place all controls in neutral, stop tractor engine, set park brake, remove ignition key and wait for all moving parts to stop before servicing, adjusting, repairing or unplugging.
13. Keep all hydraulic lines, fittings and couplers tight and free of leaks before using.
14. Review safety instructions with all operators annually.

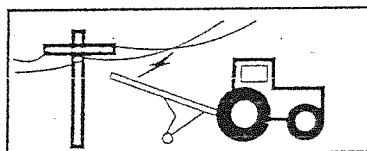

MAINTENANCE SAFETY

1. Follow all the preparation, operating, maintenance and safety information in the manual.
2. Support the machine with blocks or safety stands when working beneath it.
3. Follow good shop practices:
 - Keep service area clean and dry
 - Be sure electrical outlets and tools are properly grounded
 - Use adequate light for the job at hand.
4. Use only tools, jacks and hoists of sufficient capacity for the job.
5. Make sure all guards are in place and properly secured when maintenance work is completed.
6. Keep hands, feet hair and clothing away from moving or rotating parts.
7. Clear the area of bystanders, especially small children, when carrying out any maintenance and repairs or making any adjustments.

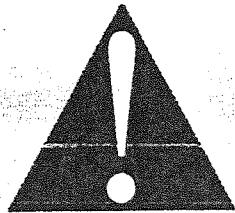

TRANSPORT SAFETY

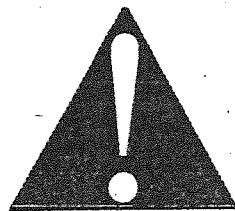

1. Clean reflectors, SMV and lights before transporting.
2. Use hazard flashers on tractor when transporting.
3. Add extra lights and use pilot vehicle when transporting during times of limited visibility.
4. Keep away from overhead electrical lines.
Electrocution can occur without direct contact.
5. Be aware of the width and height of your machine.
Do not enter narrow or low areas without checking.
6. When transporting the machine on public roads, it is the responsibility of the operator to ensure prevailing Road Traffic Regulations are strictly adhered to.
7. Transport requires constant care to avoid accident, injury or death.

STORAGE SAFETY

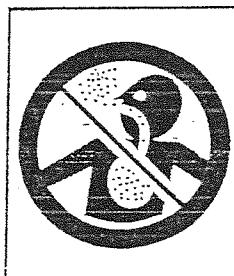

After the seasons use, the machine should be thoroughly inspected and prepared for storage. Repair or replace any worn or damaged components to prevent any unnecessary down time at the start of next season. To insure a long trouble free life, this procedure should be followed when preparing the unit for storage:

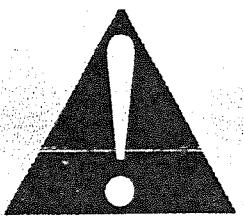

1. Clear the area of bystanders, especially small children.
2. Thoroughly wash the machine using a pressure washer to remove all dirt.
3. Touch up all paint nicks and scratches to prevent rusting.
4. Move to storage area.
5. Select an area that is dry, level and free of debris.
6. Unhook from tractor.
7. If the machine cannot be placed inside, remove the metering units and store inside, then cover machine with a waterproof tarpaulin and tie securely in place.
8. Store the machine in an area away from human activity.
9. Do not allow children to play on or around the stored machine.

TOXIC CHEMICAL SAFETY

1. When using toxic chemicals such as pesticide granules, herbicides or fertilisers, always follow the manufacturers instructions.
2. Wear rubber gloves and other protective gear as recommended by the manufacturer. Do not allow chemical or solution to touch skin. Some can be absorbed through the skin.
3. Do not breathe vapour. Stay away from chemical splash and vapour, and wear proper respirator when working with chemicals.
4. Do not ingest chemical. Chemicals can be toxic. If in eyes or mouth, read chemical manufacturers instructions and follow exactly.
5. In the event of an accident involving chemicals, seek medical attention immediately. A poison control number is normally inside the front cover of your telephone book.

SAFETY SIGN-OFF FORM

FAN ASSEMBLIES

IMPORTANT WARNING

IMPELLER INSPECTION

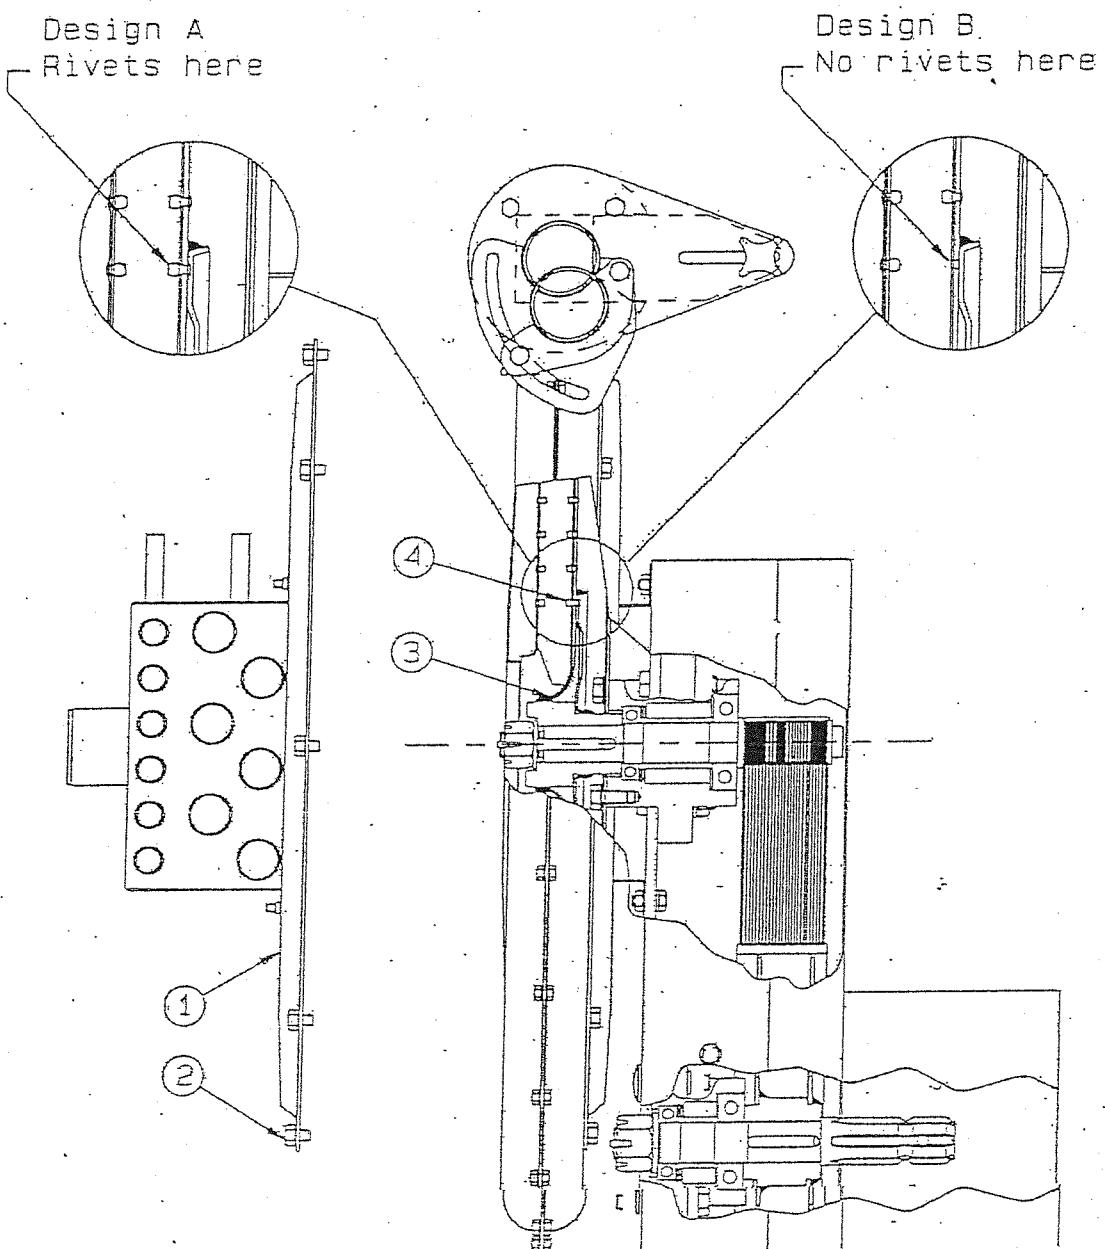

We have been issued with an advisory by the manufacturers of the fans. Please take the following request as a mandatory safety action.

1. All new fans should be inspected after one day's usage to check the integrity of the central impeller weld as indicated on the illustration opposite.
2. If there is any evidence of stress cracking or weld failure do not use the fan until a new impeller has been fitted.
3. Inspect the fan on an annual basis thereafter.

From the illustration opposite, you will see that there are two types of impeller, A and B. Please report any failures stating whether it is type A or B.

To Inspect Fan Impeller

1. Disconnect PTO drive line from tractor
2. Remove outer cover (1) by removing 8 screws (2)
3. Carefully clean the curved area marked (3) on the drawing round the entire circumference
4. Using a bright light, carefully inspect the clean area (3) for sign of stress or weld cracking
5. If ANY CRACKING IS FOUND, STOP USING THE FAN UNTIL THE IMPELLER IS REPLACED
6. Please note whether Design A or B impeller is fitted, by reference to the line of rivets at (4)

SETTING UP FOR WORK

PREMILINARY CHECKS

1. Number metering units

Mark identification number on both halves of each metering unit and on each singulator.

Note: singulators are factor calibrated to ensure all units perform similarly, they MUST remain fitted to the units as supplied.

2. Check row units

Raise machine off the ground, then check:

- a) Wheels: check all wheels rotate: check adjustment of scrapers and cleaners.
- b) Pivots: check nuts and bolts are tight: check chassis will pivot freely
- c) Clod deflectors: check that blade slides freely in track: then pin out of work.

3. Check PTO shaft

Start PTO raise machine fully. Adjust stop on tractor linkage control lever quadrant. If necessary, shorten PTO shaft to ensure end float at all times.

Fit the PTO drive shaft clutch end to fan unit, cutting to length as required.

Try to obtain maximum sliding profile overlap, but without bottoming out, to avoid mechanical damage to the fan unit.

NOTES: SEE SHAFT MANUFACTURERS SERVICE INSTRUCTIONS

- a) In its working position, the drive shaft must not be extended by more than half the sliding profile overlap available when fully compressed.
- b) Shorten inner and outer guard tubes equally.
- c) Shorten sliding profiles by same length as guard tubes.
- d) Remove all sharp edges and burrs.
- e) GREASE SLIDING PROFILES.
- f) GUARD CHAINS MUST BE PROPERLY FITTED.
- g) Do not suspend drive shaft from the chain.

DO NOT RELY ON TRACTOR HYDRAULICS.

DO NOT WORK UNDER UN-PROPPED MACHINE

4. Check hoses

Check all hoses are CORRECTLY and SECURELY fitted:

Raise and lower machine: check hoses are not too tight, and do not contact shafts, sprockets or chains.

Note: unused hose stubs on the fan MUST be plugged.

5. Check hydraulics

Check operation of hydraulic markers or other hydraulic equipment.

6. Check drives

Check drive shaft locking collars are fitted securely.

7. Check tyre pressures

Chain Land Drive Wheels: 600-16 3.3 bar (48 psi)

Transport Wheels: 4.0 bar (59 psi)

STAR SEED DISCS CHECKING, FITTING AND CARE

CHECKING SEED DISCS BEFORE USE

1. Discs should not be completely flat but should look slightly curved or warped. Completely flat discs should be discarded.
2. Run a finger round the edge of discs (Fig.1), which should be completely smooth. Roughness indicates "under etching". Discs with seed holes or 0.8mm diameter and above should, if under etched, have the edge smoothed off with a fine abrasive stone. Those with holes smaller than 0.8mm should be discarded.
3. Inspect discs for dents or creases. Damaged discs will not work and should be discarded.
4. Hold discs up to the light and check for blocked holes.

FITTING SEED DISCS

1. Seed discs must always be fitted concave towards the unit air gallery block even if they appear to function either way round. (Fig.2). If in doubt the discs can be checked by laying them on a flat surface and pressing them firmly down. (Fig.3). The outside edge of the disc should contact the flat surface all the way round indicating the way the disc should be fitted into the unit. If it does not turn the disc over and try again.
2. Having established which way round the discs should be fitted, mark the outside face of the disc with a felt tip pen to avoid future incorrect fitting as seed discs should never be turned over.
3. Mark the seed discs so they remain with their respective units, and always fit them with the etched part number opposite the "red" dowel on the unit turntable. (Fit.1).

CARE OF SEED DISCS

1. Remember that seed discs are fragile and no attempt should be made to remove a disc from a unit while vacuum is still applied.
2. Discs are not manufactured from stainless material and if not stored in the blue plastic bags supplied, or if left unused in a damp environment, corrosion may occur. Slight surface corrosion is not detrimental to the performance of the disc and no attempt should be made to clean off corrosion as this may damage the disc and render it unusable.
3. Under no circumstances should oil or other corrosion inhibitors be applied to the surface of seed discs, as residue will impair performance particularly with small seeds.

PREPARATION FOR WORK IN THE YARD

1. Check coulters

Check required coulters are fitted correctly. For detailed instructions, see Page 11 (COULTER FITTING INSTRUCTIONS)

2. Check row widths

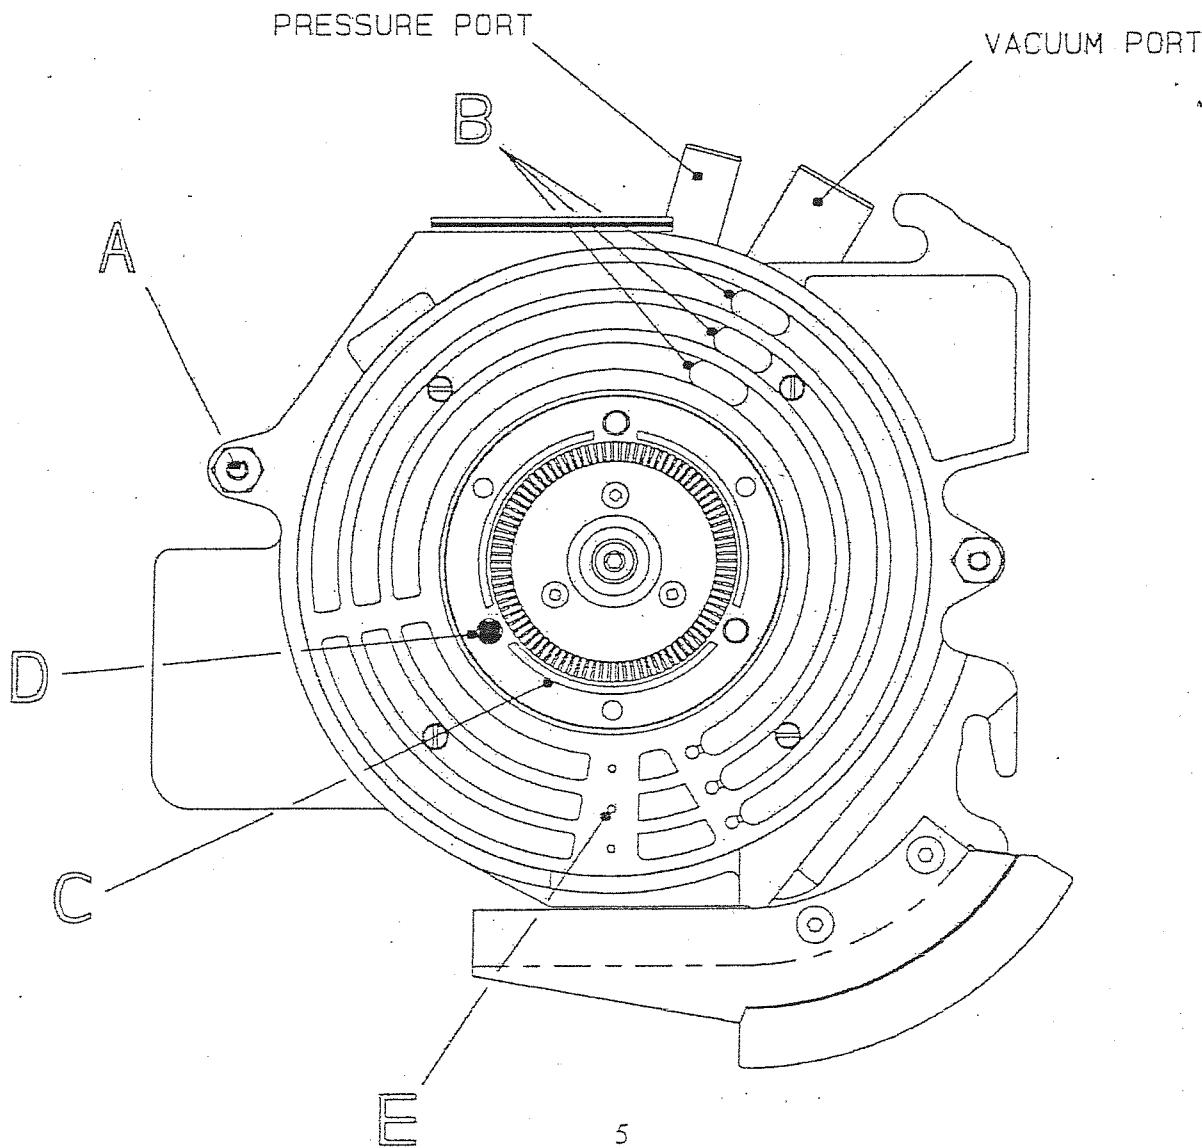

Lower machine to ground, draw forward and check row widths at coulter tips

3. Clean metering units

Empty seed from hopper, using removable drain plug, or vacuum seed emptying device. Remove hopper side of metering units and ensure the unit is absolutely clean. Use soft brush to clean vacuum galleries B; dry cloth to clean face of gallery block; air line to blow dust and seed dressing from inaccessible galleries. Note: remove pressure hose from metering unit to allow dust to escape, and direct air line behind turntable C and through hole cleaning jets E.)

IMPORTANT: METERING UNITS SHOULD BE CLEANED AT LEAST TWICE A DAY AND AFTER WORK:

(Note: avoid using dirty or heavily dressed seed, as the unit will not function correctly with such seed: if its use is unavoidable, the unit must be cleaned frequently.)

4. Set drilling depth

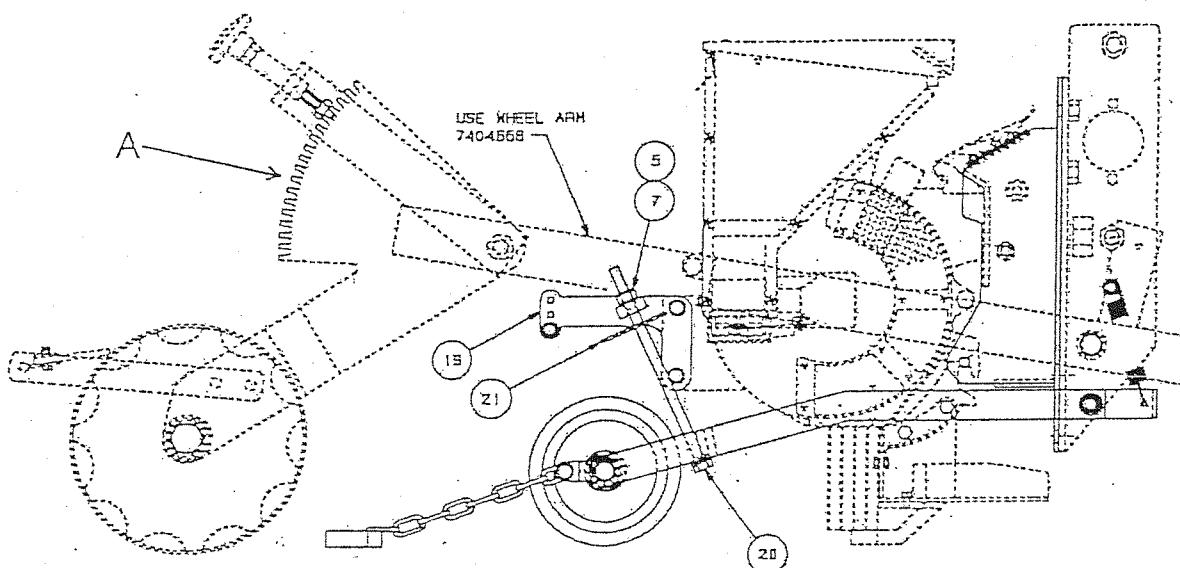

a) Coulter depth

Set rear wheel depth adjustment quadrant (A) to give a sowing depth slightly shallower than the required normal drilling depth (Note: field adjustment of sowing depth is most easily achieved by progressively adjusting coulters downwards until the desired sowing depth is achieved).

b) Seed press wheel depth (if fitted)

Setting of press wheel depth is achieved by adjusting item 7 M10 nyloc nut, set to same depth as coulters, or as required. (Note: use of seed press wheels is not recommended in damp soils: if in doubt, remove from machine)

EMPTY SEED FROM HOPPERS BEFORE TRANSPORTING MACHINE TO FIELD.

UNIT SETTING AND CALIBRATION

1. Raise machine on tractor three-point linkage until main drive wheels are clear of ground.
2. Refer to seed setting guide and seed spacing charts, to determine seed discs and gear setting required.
3. Set landwheel drive gearbox in required gear, rotate landwheel and check drive chain is tight and in line.
4. Remove hopper halves of units, retained by two conical nuts, making sure they are marked in such a way they will be paired with the same metering units when replaced. Normally with row number.
5. Refer to seed setting guide and check the units are set up to handle the seed to be metered.
6. Select, check and fit seed discs See separate instruction
7. Start tractor, engage PTO and open throttle until the vacuum gauge reads 30mb. See separate instruction
8. Rotate the drive landwheel(s) and check that the seed discs are being sucked firmly to the plastic air gallery blocks. The discs will vibrate if air is leaking, and this will be clearly audible. If discs are leaking air, pull off the vacuum hose, turn the offending disc(s) over, replace hose, and check again.

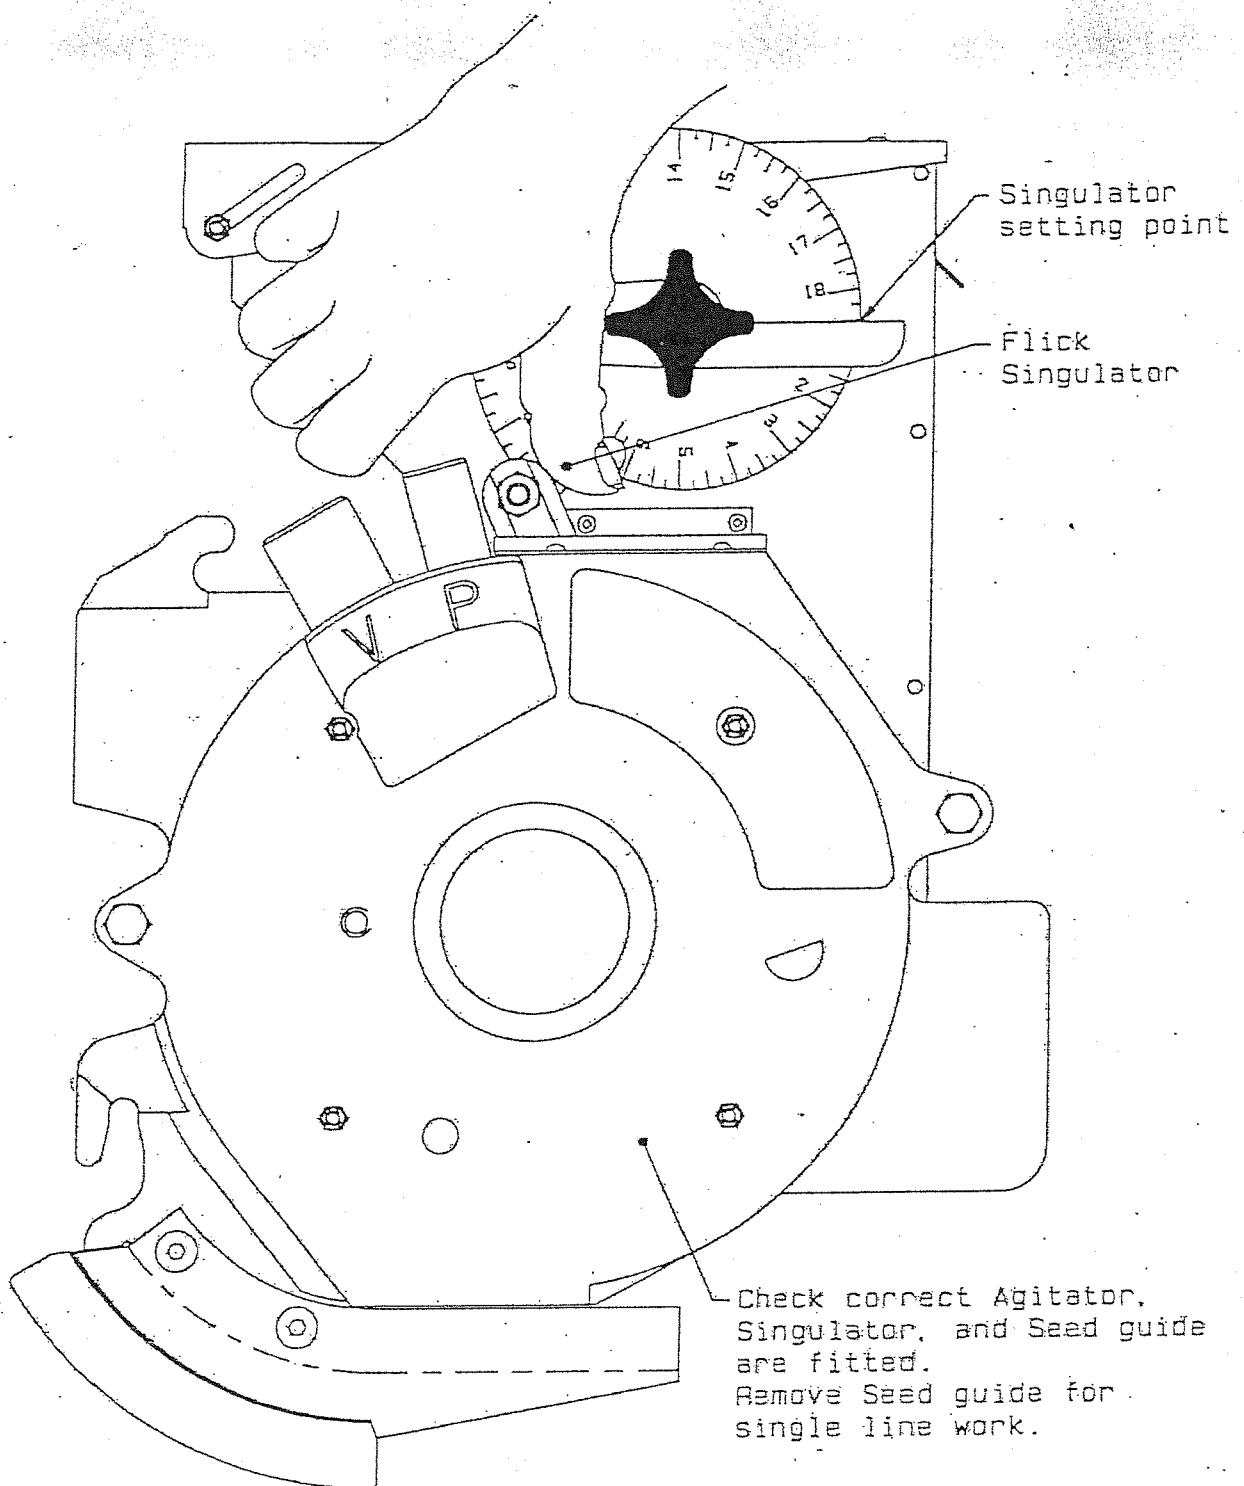

NOTE: A seed disc that does not appear to work should be tried on a unit that IS working, to establish that the problem is with the seed disc, and not the offending unit. Do not be tempted to increase vacuum to get a disc to seal, as field problems will inevitably result. Mark seed discs so they remain with their respective units.

9. Refit unit hopper halves to their respective units, and tighten the conical nuts with the tool supplied.
10. Flick singulator arms away from setting cams a few times, to ensure singulators are seated squarely and firmly against face of seed discs
11. Choose a convenient unit to calibrate, where the seed disc is easily visible. Set the singulator on no 16, check the seed emptying plug is fitted, and pour seed into the hopper

NOTE: With some seeds the odd miss is unavoidable as resist the temptation to increase vacuum unnecessarily.

NOTE VACUUM LEVEL

12. Set air pressure to 20% of vacuum or 10mb, whichever higher.
13. While rotating landwheel adjust singulator downwards until NO seeds are present on the seed disc, and then, very gradually readjust to a higher setting until single seeds appear.
14. Adjust all singulators to the same setting, pour seed into hoppers, and turn handwheel. If vacuum level rises, readjust using tractor throttle. NOTE ENGINE R.P.M. required for work. Check all units are performing satisfactorily, adjusting if necessary.

UNIT SETTING AND CALIBRATION

FIELD OPERATION

1. Tractor linkage control and coulters

- a) ALWAYS lower and raise machine on the move to prevent coulters blockage.
- b) ALWAYS raise machine and check coulters for blockage if you have stopped for any reason whilst drilling
- c) ALWAYS move tractor linkage control lever to "fully down" position when going into work to ensure adequate land wheel drive
- d) ALWAYS raise machine fully when turning at headlands

2. Tractor forward speed

- a) ALWAYS operate at the recommended forward speed (slower speeds are OK, but higher speeds will give misses on the seed disc)

3. Hoppers and transport

- a) ALWAYS fill hoppers with seed to the same level, and check periodically that seed levels go down evenly
- b) ALWAYS keep hopper lids firmly closed except when filling
- c) ALWAYS empty hoppers of seed before transporting machine or driving long distances; for short distances, keep PTO engaged to ensure discs remain seated against vacuum galleries.

4. Gauges and seed discs

- a) REGULARLY check vacuum and pressure reading during work; immediately investigate cause of any unexpected change of readings, or of any unusual noise from the fan. A loud whistling noise from the metering unit indicates complete loss of vacuum. Note: the tractor engine can be allowed to idle when the tractor is turning or is stationary at headlands; only during work must the vacuum and pressure be maintained)
- b) REGULARLY check unit performance. To check seed disc pick up, raise machine on the move at normal drilling speed, maintain vacuum, stop and inspect seed discs. (Note: misses usually indicate blocked holes in disc, or unit requires cleaning.)
- c) ALWAYS wipe seed off the disc in the area of the singulator before replacing hopper side of metering unit, to avoid trapping seed between the singulator and the disc.
- d) ALWAYS clean units at least twice a day and after work do not leave seed, seed dressing or dust in the unit overnight; if the machine is to be out of use for more than ONE DAY, the seed discs should be removed and stored in a dry place.

NOTES: CORRECT OPERATION IS THE RESPONSIBILITY OF THE OPERATOR WHO SHOULD CHECK PERIODICALLY THAT THE DESIRED SEEDING RATE, PLANTING DEPTH AND MACHINE PERFORMANCES ARE BEING ACHIEVED.

COULTER FITTING INSTRUCTIONS

1. Fitting 2 or 3 Line Coulter and Seed Guide

- a) Fit coulter over the bottom of the unit body casting, align the holes A and retain with the fasteners supplied.
- b) Pivot the rear of the coulter upwards to achieve the minimum gap B between the underside of the body casting and the top of the seed chutes at the rear of the coulter, 1mm maximum.
- c) Holding the coulter in position, tighten the fasteners until the coulter is firmly clamped in place
- d) Fit seed guide C to the hopper side of the metering unit locating the dowel on the guide through the holes in the casting. Attach using the screw and self-locking nut D with the nut on the outside, as shown.

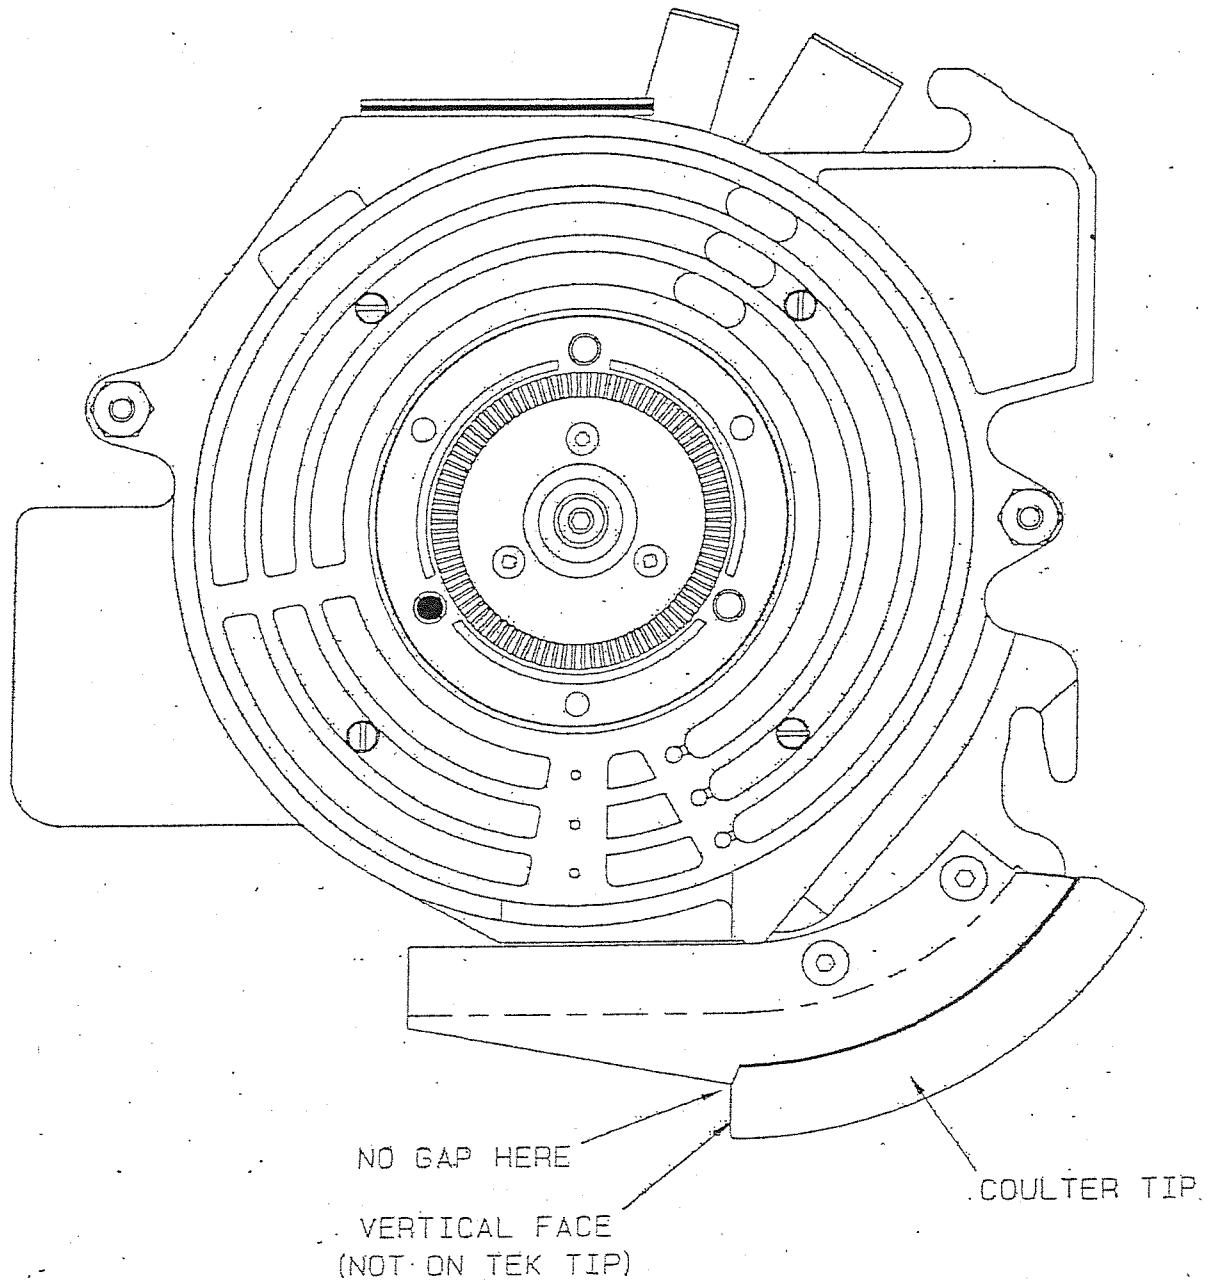

Finally, fit the self-tapping screw E through the hole in the Perspex window into the boss moulded onto the guide. The seed guide is fragile and will be damaged if the fasteners are over-tightened.

(Note: when the hopper side is fitted to the body, check that the bottom of the seed guides F line up with their respective coulters seed chutes.)

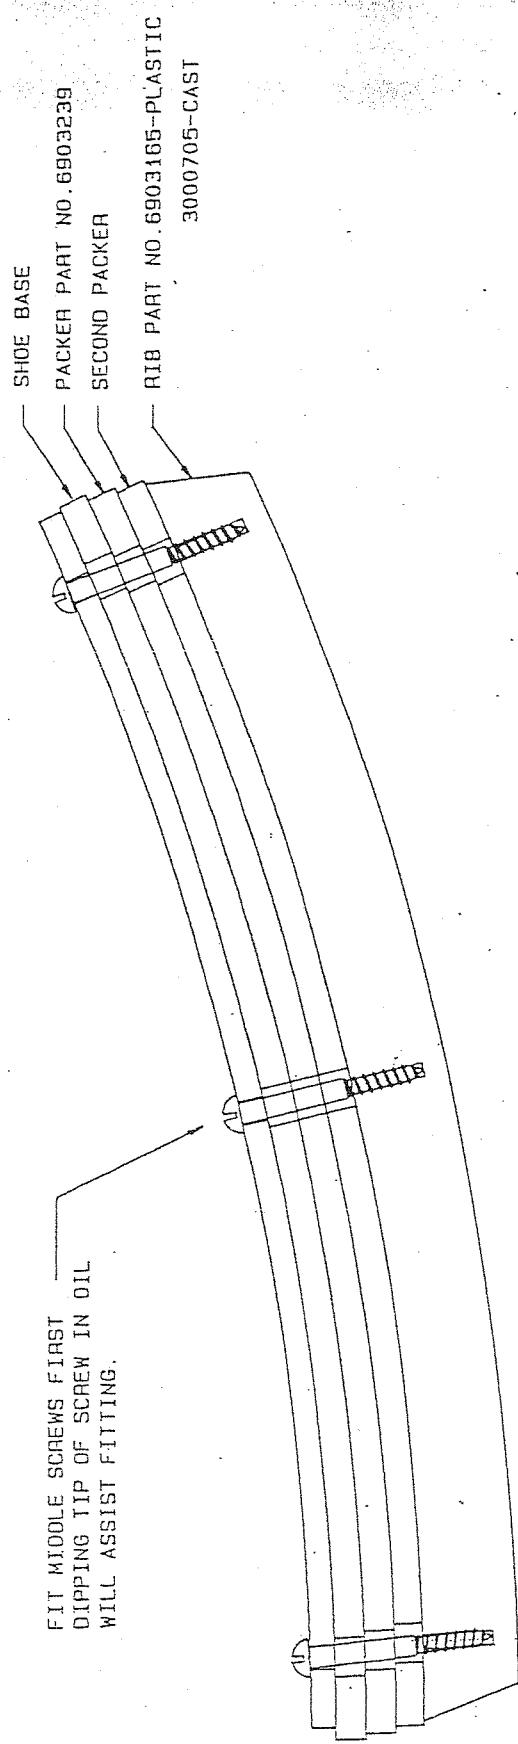

2. Fitting Single Line Coulter

- a) The coulter tip is clamped to the bottom of the unit body casting between stainless steel clamping plates, by two pairs of socket head screws. When fitting, ensure that the vertical rear face of the coulter tip locates firmly against the cut-outs in the clamping plates as shown, to prevent soil entering the seed outlet area.
- b) When changing from 2 or 3 line coulters to single line, remove the seed guide from the hopper side of the metering unit to allow seed to fall centrally to the furrow bottom.

PREPARING METERING UNITS

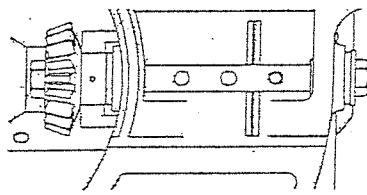

1. Fitting replacement Agitator

Most seed types require the STANDARD AGITATOR with various numbers of rubber fingers, except for some pelleted (full coated) seed, and raw parsnip. See Seed Setting Guides. To prepare a PELLETED AGITATOR, snip off the fingers of a standard agitator to 3mm length. The PARSNIP AGITATOR has two roll pins in place of the rubber fingers. To fit, follow this procedure:

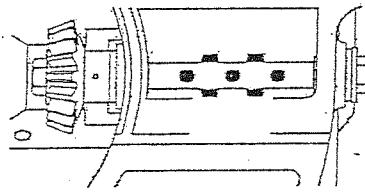

- a) Holding the agitator spindle with a pair of grips, unscrew gear assembly A (left hand thread) and bolt B (left hand thread). The complete agitator may then be removed.
- b) When re-assembled the agitator should turn freely. If more end float is required, washer C may be removed.

STANDARD AGITATOR

PARSNIP AGITATOR

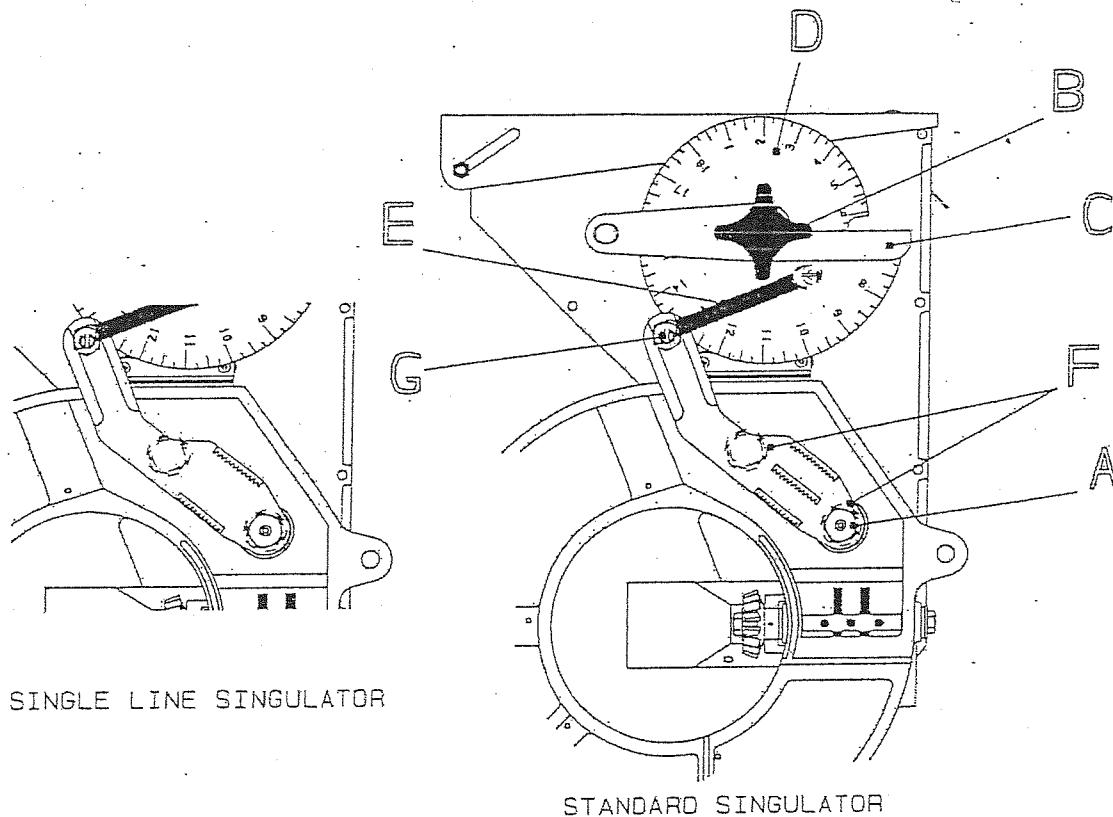

PELLET AGITATOR

2. Fitting replacement Singulator Arm The STANDARD SINGULATOR is suitable for most one, two and three line drilling. To handle some larger seeds, the alternative SINGLE LINE SINGULATOR may be required. Refer to SEED SETTING GUIDE. To change Singulators, follow this procedure:

- Remove handwheel B and lift off setting arm C and setting cam D. Remove retaining cap A, if fitted.
- Lift off Singulator, and unhook spring E
- When re-assembling, ensure that springs F are located over the bosses on the underside of the Singulator.

(Note: Singulators are factory calibrated to ensure all units perform similarly: they must remain fitted to the units as supplied. When fitting new Singulators, the units must be re-calibrated see instructions

3. Calibrating singulator assemblies It is the responsibility of the operator to ensure that all units are calibrated similarly. Machine calibration must be checked and adjusted when the machine is new, periodically thereafter, and when fitting new or alternative singulators. Follow this procedure:

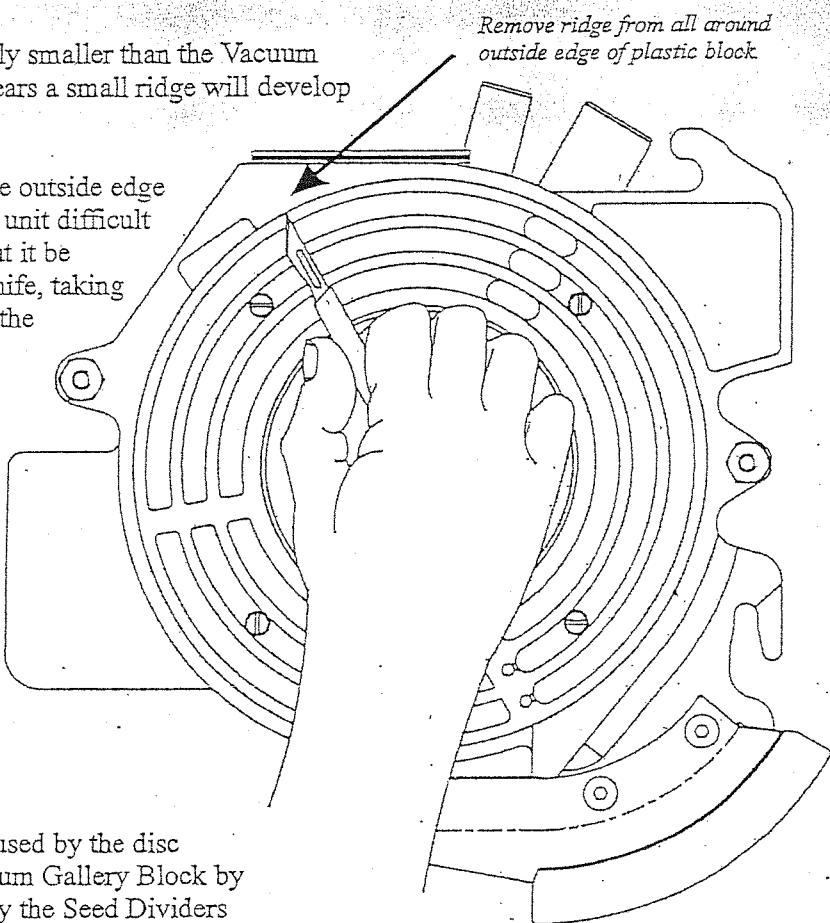

- Select your most difficult seed (for example raw carrot, raw chicory, raw lettuce)
- Clamp the singulator cam on all units to setting 6 and leave them at this setting throughout the calibration procedure. Then calibrate each unit individually by turning the "eccentric boss" G until all units deliver the same. (To adjust the "eccentric boss", loosen the lock nut until the boss can just be turned by a large screwdriver, then adjust by turning anti-clockwise. When satisfied, hold the boss in position using the screw-drive, and re-tighten the lock nut.)
- Check in work that the seed usage from all units is similar. If seed usage from any unit is slightly different from the remainder, adjust the singulator until all units perform similarly.

UNIT MAINTENANCE

Because the seed disc is slightly smaller than the Vacuum Gallery Block, as the block wears a small ridge will develop around the outside.

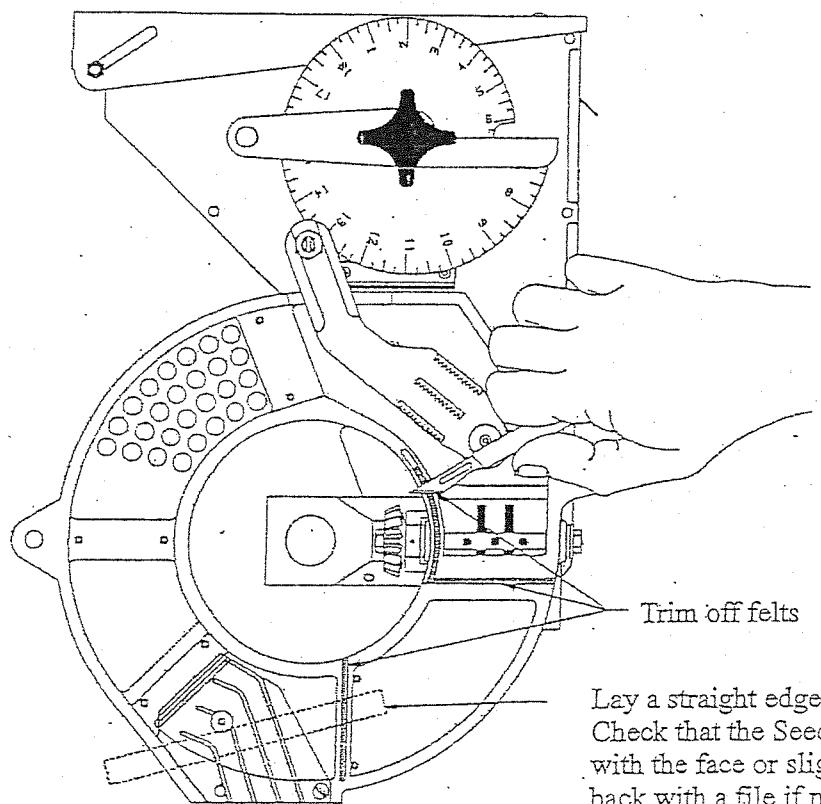

Because this ridge may grip the outside edge of the Seed Disc and make the unit difficult to drive, it is recommended that it be removed with a sharp utility knife, taking care not to damage the face of the Gallery Block.

The block may be removed if desired and, if replaced in the same unit, re-sealing is unnecessary.

Most premature disc wear is caused by the disc being clamped against the Vacuum Gallery Block by the felt seals in the unit lid, or by the Seed Dividers

Before fitting a Seed Disc, always check that the felt seals are flush with the face of the unit lid casting. If not, trim flush, using a scalpel or sharp utility knife as shown below.

Lay a straight edge on the lid as shown. Check that the Seed Dividers are flush with the face or slightly below. Dress back with a file if necessary.

SEED DISCS

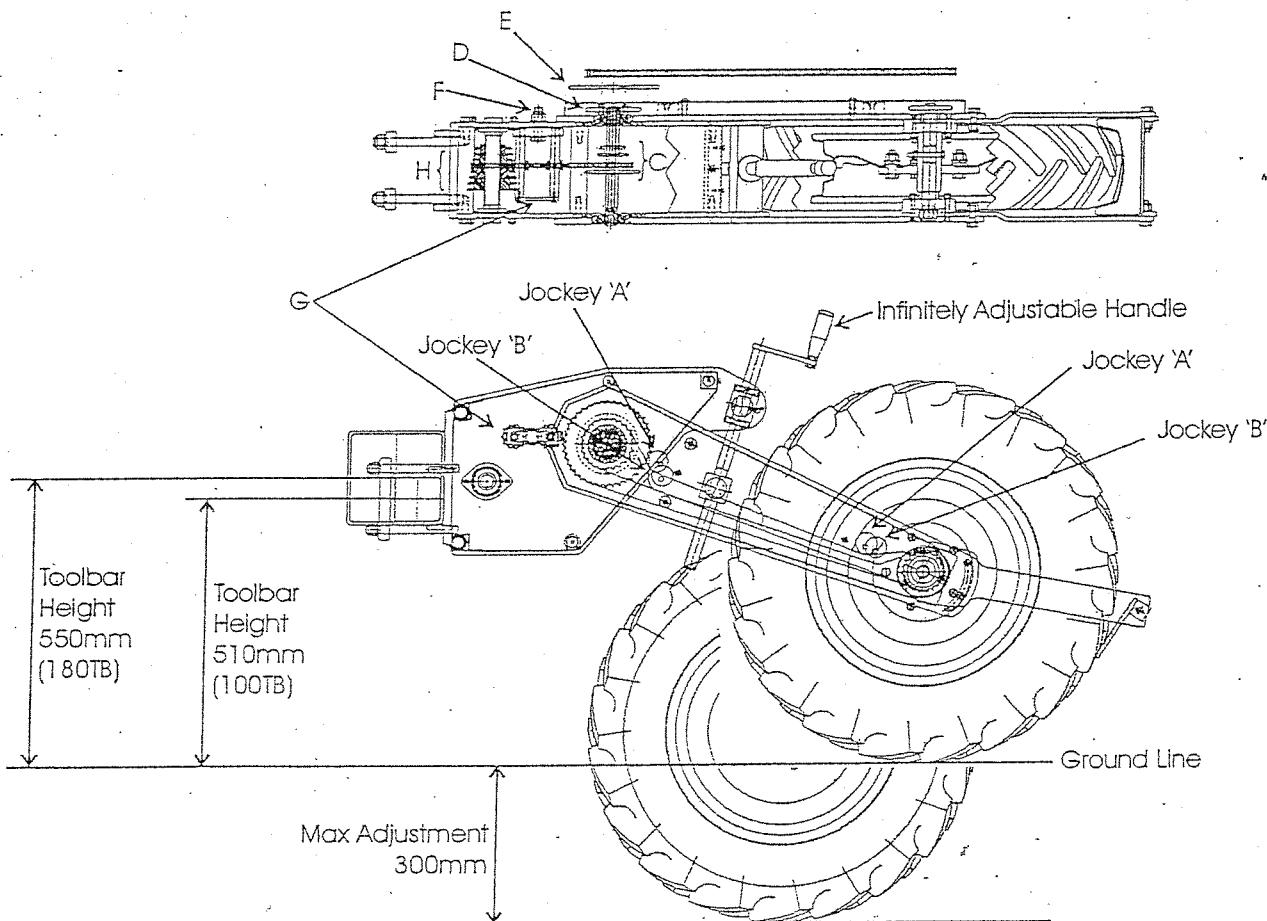

1. Choosing the correct Seed Disc Choosing the correct disc is vital to achieve the desired performance. Follow these guidelines.
 - a) Find the seed you wish to plant in the SEED SETTING GUIDE. Select the number of lines you will be planting (1,2 or 3) and note the recommended seed disc. (Note: the first digit – for example 0.6 – is the diameter of each hole in mm; the second digit – for example 96 – is the number of holes in each line: a single line disc of this specification is designated 0.6 x 96 x 1 line, a two line disc 0.6 x 96 x 2 line, and a three line disc 0.6 x 96 x 3 line)
 - b) You may be given a choice of seed discs (for example, 96 or 48 holes). If so, for faster forward speeds, choose the greater number of holes, but for best accuracy of seed spacing when multi-line drilling, choose the lesser number of holes.
 - c) Two disc speeds are shown: slow (12 rpm), and fast (25 rpm). As a general rule, the slower the disc speed the better the seed spacing, particularly with multi-line drilling. The special instructions section on the SEED SETTING GUIDE indicated where alternative instructions apply.
 - d) Having selected a seed disc, refer to the SEED SPACING CHART for the appropriate number of holes and the Gearbox (24 tooth or 40 tooth sprocket) you will be using. Then check that the disc speed you have chosen (rpm seed disc) gives an acceptable forward speed at the seed spacing you require.
 - e) Standard seed discs are shown in the SEED SETTING GUIDE. Other discs are available to special order. These include 3-line discs for carrot and onion giving 75% seeding rate in the central line (for example 0.6 x 144/144/108; 0.8 x 96/96/72; etc).

SETTING SEED SPACING

1. Choose Settings Select the required gear setting from the appropriate SEED SPACING CHART. The setting indicates the sliding sprocket (C) and the final drive sprocket (H) that are required. It also indicates the primary drive sprocket required. 24T (D) (as fitted) and 40T (E).

2. Setting Seed Spacing

- Check required primary drive sprocket is fitted D or E. Tension chain by fitting 2 off jockeys in correct position. 24T (D) jockey position (A) 40T (E) jockey position (B). DO NOT OVER TENSION CHAIN.
- Loosen nut (F) and turn tensioner frame (G) to release secondary drive chain.
- Fit drive chain over appropriate "driven sprocket" and "sliding sprocket". Check that the chain is in line and re-tension, re-tighten nut (F).
- Turn the landwheel by hand and check chain tension and drive.

SETTING AIR SUPPLY

1. Choose settings Identify the required vacuum and pressure settings, and the recommended forward speed. Check recommended seed discs are fitted in all units.
2. Check for leaks Check all hoses are securely connected. Check unused vacuum and pressure ports on fan are securely plugged.
3. Set valves Follow this procedure:
 - a) Open fully valves 4 and 5 on fan, start tractor, engage PTO on minimum engine speed
 - b) Increase tractor engine speed until required vacuum reading shows on vacuum gauge.

SAFETY INSTRUCTION. NEVER EXCEED 540 RPM PTO SPEED

(Note: If the gauge does not respond immediately to the increase in engine speed, or the belt screams, the fan drive belts is probably slack.

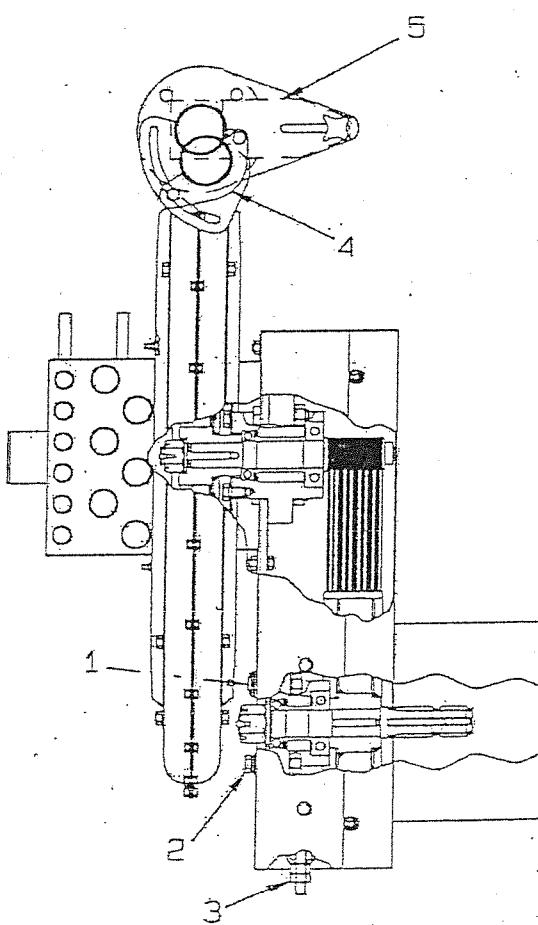

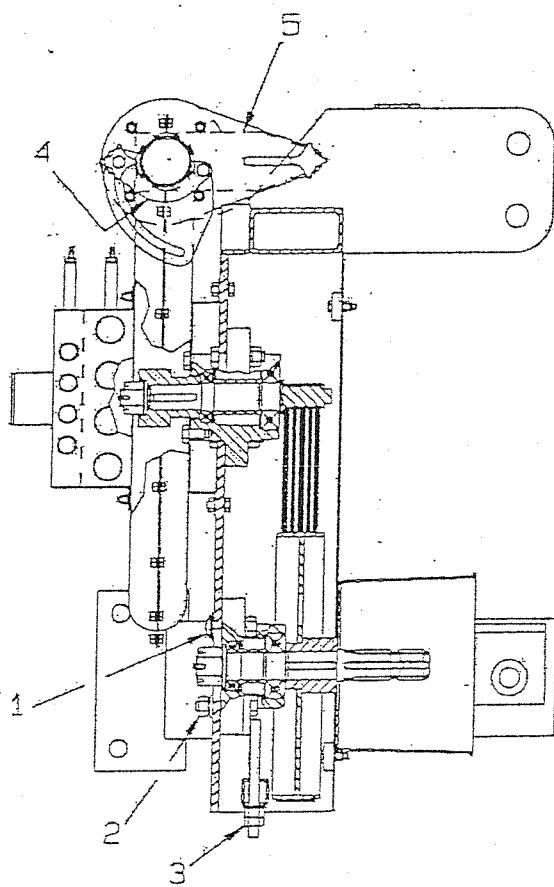

- c) Progressively close valve 4 until the required pressure reading shows on pressure gauge. Increase engine speed if necessary to maintain vacuum level. If pressure reading is too high even with valve 4 fully open, remove plugs from unused pressure ports.
- d) Pour seed into hoppers, turn land drive wheel(s) in forward direction to prime the discs with seed, and readjust vacuum and pressure if necessary (see notes below)

Notes on Setting Valves

- a) Increasing tractor engine speed increases both vacuum and pressure
- b) Closing valve 4 increases pressure and reduces vacuum
- c) Valve 5 is normally left fully open: closing it reduces both vacuum and pressure

BELT TENSION

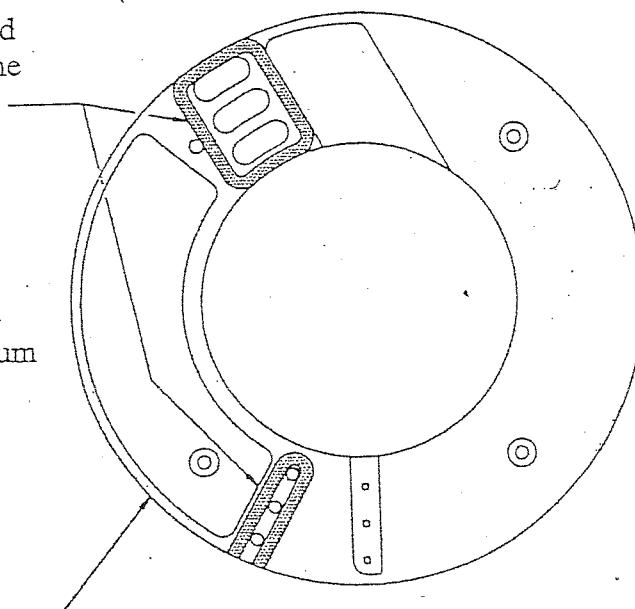

1. Slacken off the bottom bearing housing nuts and bolts (1 & 2) until the PTO pulley moves under its own weight.
2. Tighten the adjusting screw nut (3) whilst rotating the PTO pulley by hand until the slack is taken out of the belt.
3. For the 17 rib fan, tighten the adjuster screw nut a further 0.83 turns (5 flats on the nut) whilst turning the PTO pulley. For the 26 rib fan, tighten the adjuster screw nut a further 1.5 turns (9 flats on the nut) whilst turning the PTO pulley.
4. The belt will now be under the correct tension. Lock the adjuster nut and tighten the bottom bearing housing mounting nuts and bolts.

REPLACEMENT OF GALLERY BLOCKS

FITTING INSTRUCTIONS

1. Remove existing gallery block and thoroughly clean body.
2. Apply a thin bead of gasket compound such as red hermatite to the back of the gallery block where shown.
3. Fit gallery block to body, replace the four fixing screws and tighten.
4. Check that no compound has contaminated the working face of the gallery block or exuded into the vacuum release holes.

FAULT FINDING GUIDE

Be familiar with all instructions in this manual before using this guide.

VACUUM READING DROPS

Reason:	Solution:
1. No seed in hoppers	Fill hoppers and re-prime seed discs
2. Seed disc(s) not holding vacuum	Check discs for damage or wear
3. Seed, seed dressing or contamination between seed discs and vacuum gallery blocks	Clean units thoroughly and clean out any blocked holes in seed discs. Check for seed migrating up around edge of seed discs. See instruction VACUUM GALLERY BLOCK
4. Damaged agitator	Check rubber fingers are securely fitted and repair or replace as necessary
5. Vacuum hose disconnected or damaged	Check hoses for free play and reconnect or replace as necessary
6. Fan unit not driving	Check PTO shaft. Remove drive cover and check belt for tension and damage. Check that top or bottom pulleys rotate freely and bearing shave not seized or collapsed.
7. Spare vacuum stubs on fan unit unplugged	Securely plug all spare vacuum and pressure stubs.

UNITS NOT PICKING UP SEED

Reason	Solution:
1. Seed disc holes too small for seed size	Check recommended hole size
2. Singulators incorrectly set	Back off, check seed pick up and re set correctly
3. Units turning too quickly	Check forward speed/gear recommendations and re-set as necessary
4. Incorrect vacuum or pressure levels	Check recommendations and re-set
5. Seed discs worn, damaged or with blocked holes	Clean units thoroughly and clean out any blocked holes in seed discs. Check discs are holding vacuum
6. Seed, seed dressing or contamination between seed discs and vacuum gallery blocks	Clean units thoroughly. Check seed flows freely into coulter. Check discs are holding vacuum.

FAULT FINDING GUIDE

- | | |
|---|---|
| 7. Unit vacuum and pressure hoses incorrectly fitted | Check and re-fit, if necessary |
| 8. Insufficient seed agitation or incorrect agitator fitted | Check rubber fingers are securely fitted, and repair or replace as necessary. Check that the agitator rotates freely. |

SEED DISC HOLES CONSTANTLY BLOCKING

Reason	Solution
1. Incorrect hole size	Check recommendations
2. Dirty or poor quality seed.	The most common cause of blocked holes, large clean seed should be used if possible for best performance

UNITS NOT DROPPING SEED CORRECTLY

Reason	Solution
1. Insufficient pressure and/or too much vacuum causing small seed to be sucked back up into unit	Check recommendation and reset accordingly. Unit must have 26 x 9mm holes at top of window
2. Seed splitters and/or coulters incorrectly fitted	See fitting instructions and re-adjust
3. Dirty, damp or plugged coulter seed chutes	Clean seed chutes and if coulters are plugged, investigate cause and rectify
4. Seed disc being clamped by centre of unit hopper side. Disc not running smoothly or seizing.	Remove disc and clean with fine abrasive. Remove vacuum gallery block. Seal and re-fit using suitable gasket sealant

SEED LEAKING AT BACK OF COULTER

Reason	Solution
1. Metering unit castings incorrectly fitted.	Ensure casting faces are clean. Refit and lightly tighten conical nuts.

INCONSISTENT SINGULATION

Reason	Solution
1. Singulator not pressed flat onto disc	Flick singulator arm several times, then re-calibrate unit
2. Worn singulator arm	Remove singulator arm, blacken all three wearing faces with felt tip pen, grip firmly and rub on fine abrasive paper until all black ink is removed. If severely worn or damaged, replace with new. Re-fit, and re-calibrate unit.

OPERATOR CHECK LIST

READ OPERATORS MANUAL FULLY BEFORE OPERATING THIS MACHINE.
THIS CHECK LIST IS ONLY A REMINDER OF THE KEY STEPS IN SETTING A
MACHINE, AND IS NOT COMPREHENSIVE.

A In Yard

1. Check units are clean and dry.
2. Check coulters and seed guides are correctly fitted.
3. Check agitator, singulator, vacuum release hole are all as recommended for the seed to be planted.
4. Using operators manual, select and note recommended seed discs, vacuum mb, pressure mb, rpm seed discs, gear setting, forward speed, landwheel rpm.
5. Set gearbox(es) to required gear setting. Check all drive chains are in line and drive shaft locking collar screws are fitted securely.
6. Fit discs, (concave side towards vacuum galleries), open both valves on fan engage PTO, raise engine rpm to give recommended vacuum, turn landwheels and check discs seal.
7. Fit hopper side of units, flick singulators several times, check drive chains and units all turn smoothly.
8. Check seed emptying plugs fitted, fill hoppers, adjust singulators to setting 16 (for zero singulation), place container under each unit, rotate landwheels to prime discs.
9. Adjust vacuum and pressure to recommended levels, noting required tractor engine speed.
10. Rotate landwheel at approximately recommended landwheel rpm and set singulator on calibration unit.
11. Set and clamp all singulators to same setting.
12. Set depth of coulter (and seed press wheel).
13. Empty hoppers or maintain vacuum during journey to field.

B In Field

1. Check linkage stabilisers or check chains are adjusted and tight.
2. Adjust tractor linkage so that toolbar is level and headstock is vertical in work.
3. Check and adjust landwheels so toolbar working height is 510 mm (20.25 ins) at centre for 100 mm toolbar and for 180 mm toolbar 550mm (21.75").
4. Selector tractor gear to give recommended forward speed at required tractor engine speed.
5. Fill hoppers, prime discs, check vacuum and pressure levels.
6. Check all seed discs are picking up and delivering seed.
7. Check coulters are not blocked and chutes are dry.
8. Check bout marker setting and operation.

C In Work

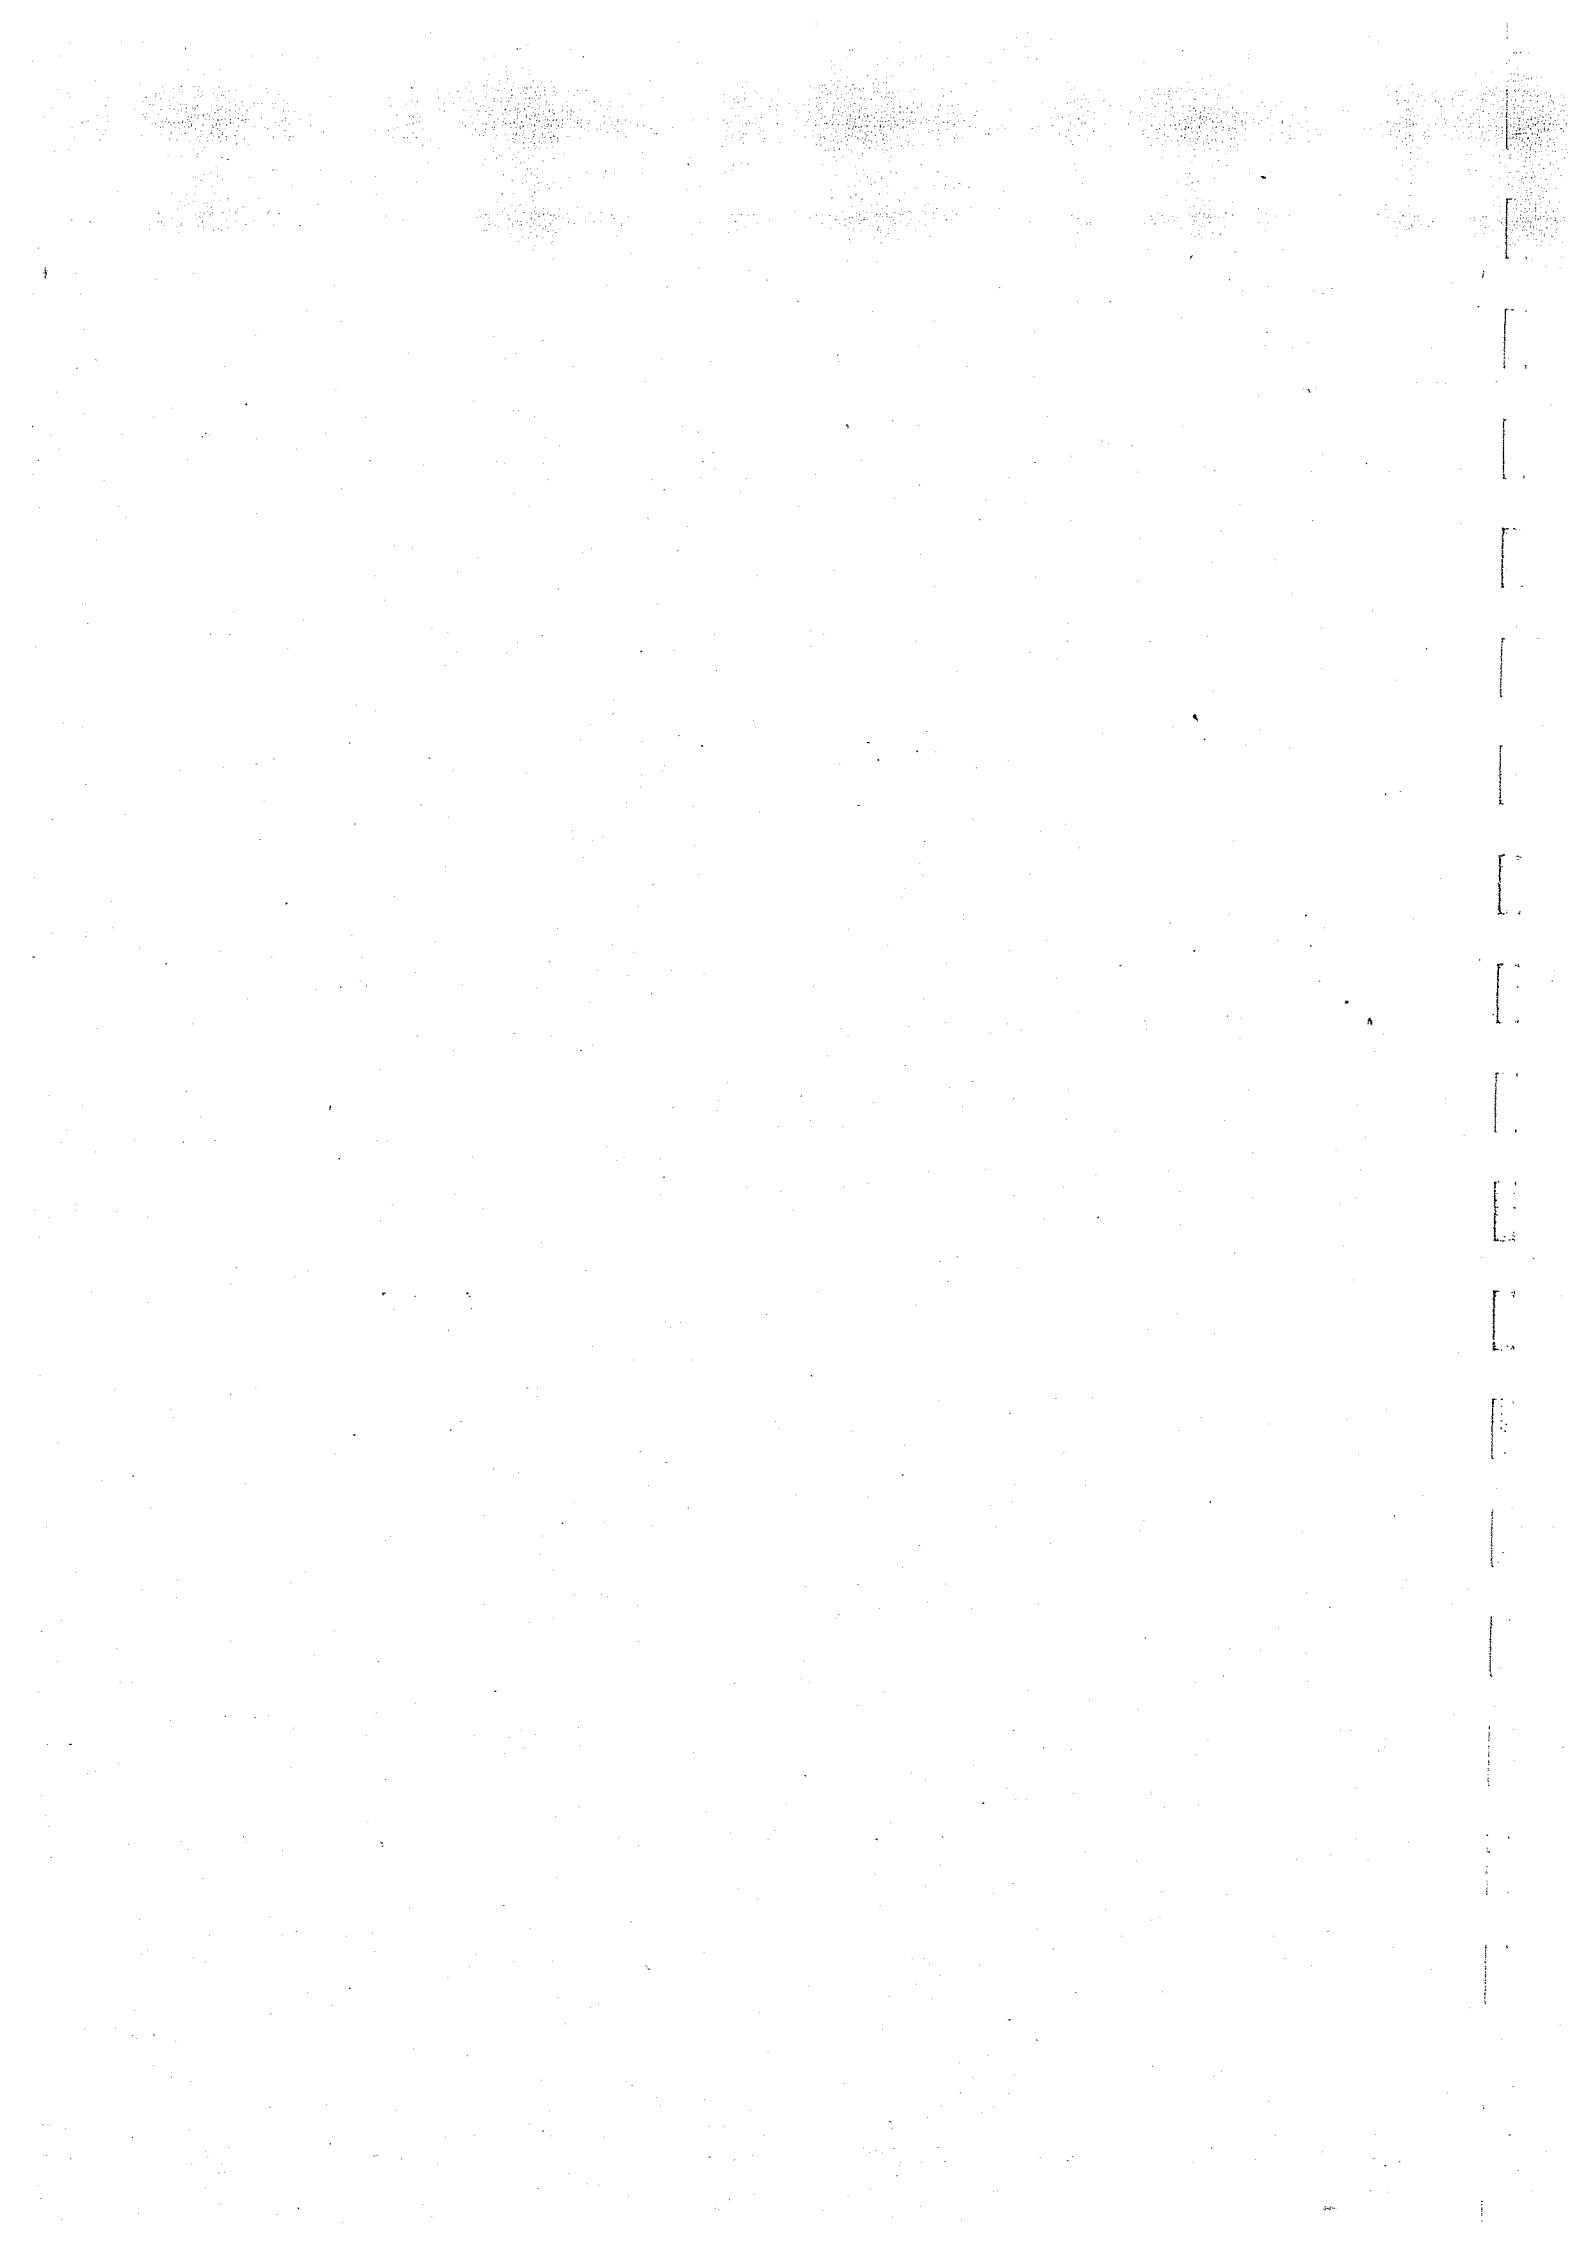

1. Check sowing depth, clod deflectors, coverers, seed press wheel, wheel scrapers.
2. Check row matching.
3. Always raise and lower machine fully, and on the move. If in doubt, check coulters for blockage.
4. Always operate at recommended forward speed, and check vacuum and pressure readings regularly.
5. Check seed discs pick-up regularly: raise machine on the move at normal drilling speed, maintain vacuum, stop and inspect seed discs.
6. Clean units at least twice a day and after work: store discs in dry place.

Note:

1. SECURE PTO SHAFT COVER TO PREVENT ROTATION IN USE. NEVER EXCEED 540 RPM PTO SPEED.
2. CORRECT OPERATION IS THE RESPONSIBILITY OF THE OPERATOR WHO SHOULD CHECK PERIODICALLY THAT THE DESIRED SEEDING RATE, PLANTING DEPTH AND MACHINE PERFORMANCE ARE BEING ACHIEVED.

CARROT - RAW

- A/. WHEN PLANTING RAW CARROT USE A $\phi 0.6$ MM HOLE SIZE SEED DISC, AND MAXIMUM DISC SPEED OF 25 RPM.
 B/. REFER TO CHARTS ON PAGES 40 TO 51 TO ESTABLISH SEED DISC REQUIRED, TOGETHER WITH GEAR SETTING,
 CHARTS HAVE BEEN PREPARED FOR ALL POPULAR BED WIDTHS, AND BOTH 11T & 16T UNIT DRIVE SPROCKETS.
 RATES SHOWN ARE BASED ON 4 THREE LINE ROW UNITS PER BED.
 FOR NON 4 ROW UNIT BED MACHINES, DIVIDE THE REQUIRED POPULATION BY ACTUAL NUMBER OF ROW UNITS
 ON EACH BED, MULTIPLY THIS FIGURE BY 4, AND USE THIS POPULATION WHEN REFERRING TO CHARTS.
 C/. HAVING ESTABLISHED GEAR SETTING, REFER TO CHARTS ON PAGES 25 TO 39 FOR MAXIMUM FORWARD SPEED.
 D/. VACUUM LEVELS WILL DEPEND ON DISC SELECTION, DISC SPEED AND SEED SIZE, BUT 50 MB IS TYPICAL.
 E/. PRESSURE SHOULD BE SET AT 20% OF VACUUM, OR 10 MB, WHICHEVER IS HIGHER.
