BE ALERT YOUR SAFETY IS INVOLVED

This symbol "**SAFETY ALERT**" is used in this manual and on the safety decals on the Round Bale Handler. It warns you of the possibility of danger. Carefully read, understand and follow all safety recommendations before operating the unit.

- 1) Careful operation is the best assurance against accidents. Carefully read this manual and follow all recommendations before operating your Round Bale Handler. It is the owner's responsibility to make sure that anyone who will operate the unit will read this manual before operating the equipment.
- 2) Never let a child nor unauthorized persons operate the machine.
- 3) Do not modify the equipment. Any non authorized modification may affect the efficiency and/or safety of the equipment.
- 4) Never operate the Round Bale Handler with defective parts or if damaged in any way. Have it repaired before operating.
- 5) Make sure all fasteners are in place and properly secured or tightened. Refer to torque chart on page 40.
- 6) Hydraulic fluids under pressure can damage your skin. Do not use your hands to locate a leak. Gloves must be worn.

SAFETY IN OPERATION

- 1) Be sure there are no obstructions around the equipment and that no one stands near the machine when in operation or unloading.
- 2) Be careful when adjusting equipment with engine running.
- 3) Keep your body, hands, feet, hair and clothing away from moving parts.
- 4) Do not stand nor allow anyone to stand under elevated parts of the machine.
- 5) When not in use, always lock the loading arms with the pin provided. (Figure 10, page 9)

SAFETY WITH MAINTENANCE

- 1) Perform maintenance according to the recommendations contained in this manual.
- 2) Stop engine and relieve all hydraulic pressures before doing inspection, maintenance or repairs.
- 3) Regularly check hydraulic lines and fittings for leaks. Replace if necessary.
- 4) If you must perform work under the raised platform, **always block it in position in a safe manner.**

SAFETY IN TRANSPORT

- 1) Check local regulations for the transport of your Round Bale Handler on the road.
- 2) Be alert when pulling the Round Bale Handler on the road. Do not allow anyone to stand on it while in motion.
- 3) Be careful while backing-up.

SAFETY IN STORAGE

- 1) Lock the loading arms with the pin provided. (Figure 10, page 9)

DECALS

SAFETY DECALS

The safety decals are affixed wherever special safety precautions are indicated. Locate them on the machine and read them carefully. If a decal is damaged, lost or illegible, install a new one. Each decal is identified with a letter and part number. The following photos indicate where each one must be installed.

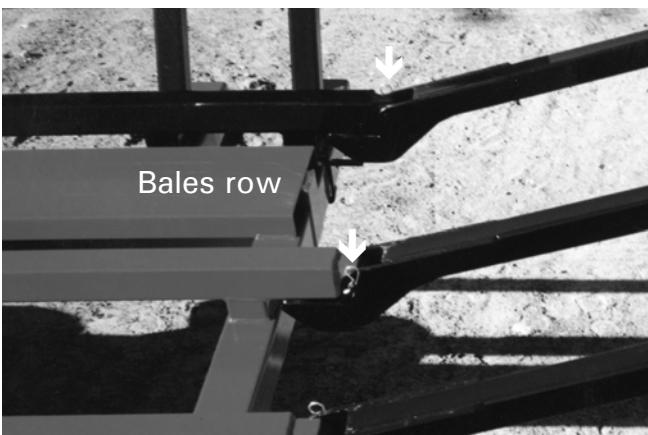

Figure 11

BASIC START-UP PROCEDURES

- 1) Lubricate all points with a good quality multi use grease.
- 2) Adjust tire pressure according to manufacturer's recommendation.
- 3) Install all hydraulic hoses and fittings compatible with your equipment.
- 4) If your tractor is equipped with a closed center hydraulic system, the conversion kit P-6890CF must be installed. A plug-in solenoid valve is provided as an option and must be connected to the hydraulic circuit and to the electric circuit. (Figure 9).

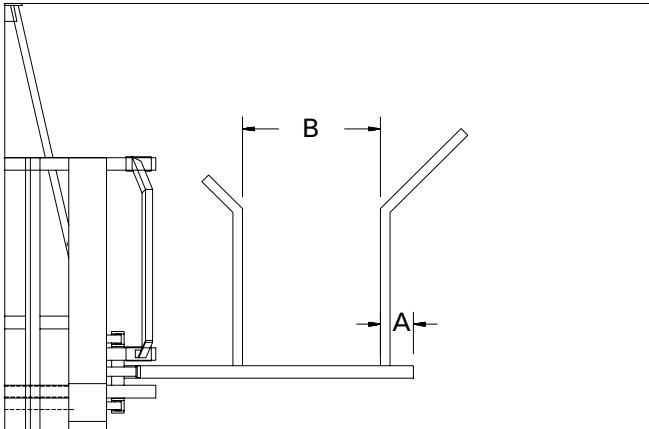

4

Models P-6812 & P-6816 only.

- 5) A third hydraulic line is required to return the oil directly to the hydraulic reservoir of the tractor.
- 6) Hook up the Round Bale Handler to the tractor and connect the hydraulic hoses as indicated in page 18, 20, 22 or 24.
 - 7) Install the control module in a convenient location near the tractor seat, usually on the right hand side.
 - 8) Operate all hydraulic functions in order to purge the system. **Do not forget to remove the pin locking the loading arm in the upright position** (Figure 10) and assure there is no one within 10 feet of the loading area.
 - 9) Check the oil level in the tractor's hydraulic oil reservoir.
 - 10) Install hinged bale slides. Insert the hinge pins so that the hitch pin clips are toward the outer side of the bale row to prevent the bale twine from snagging on the clips. (Figure 11)
 - 11) Although it is possible to transport an additional bale in the loading arm, **its weight must not exceed 1000 lbs.**

ADJUSTMENTS

4

Figure 12

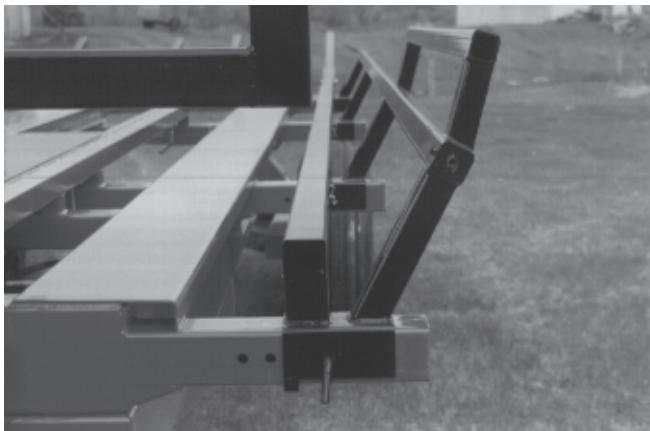

Figure 13

Figure 14

LOADING ARMS (Patented)

- 1) Adjust the opening and position of the loading arms according to recommendations (Figure 12). Adjust length A to 14" and length B to (Bale diameter less 8" to 10"). The dimensions given are to be used as a guide only since they may vary according to the bale size, weight and degree of softness.

SIDE RAILS

- 1) Adjust the side rails position according to the bale size and configuration (Figure 13). This adjustment is to prevent the rocking of the bales from side to side during transportation.

BALE RAM

- 1) The length of stroke is factory set for the longest bale dimension (5 1/2') (holes A & B) although the stroke can be shortened to further increase the efficiency of the machine while handling shorter bales (4') (holes B & C) (Figure 14).

SWIVEL HITCH ASSEMBLY

- 1) Adjust the swivel hitch assembly to keep the machine parallel with the ground. Two sets of bolt holes are provided (Figure 15) to keep the machine level in operation.

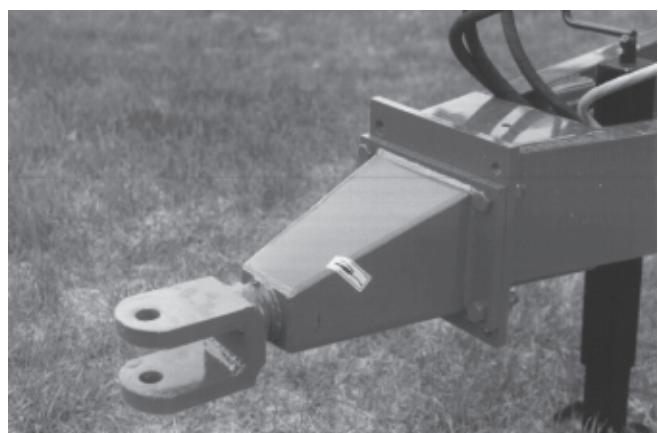

Figure 15

START-UP (cont'd)

OPERATION

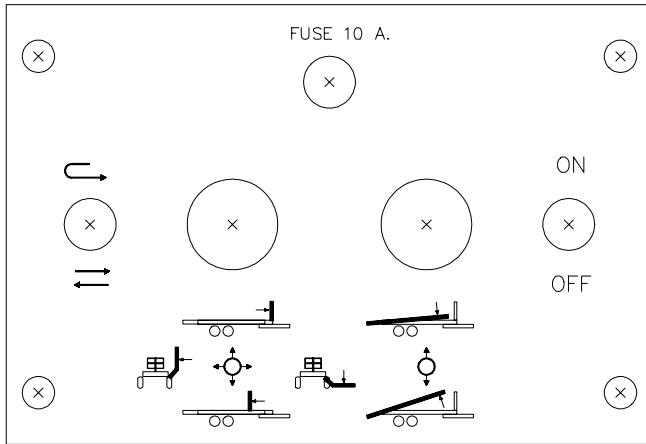

Figure 16

4

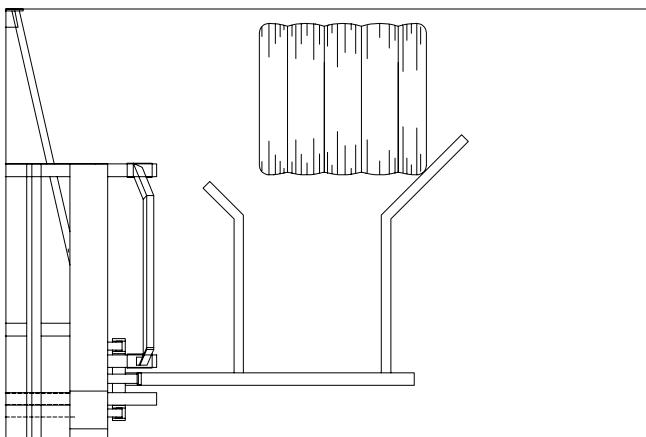

Figure 17

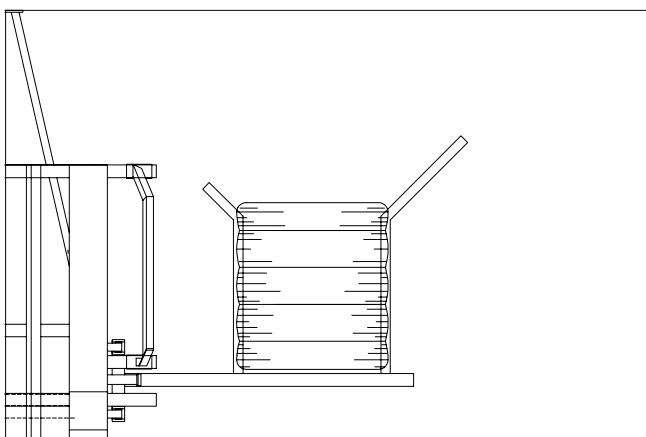

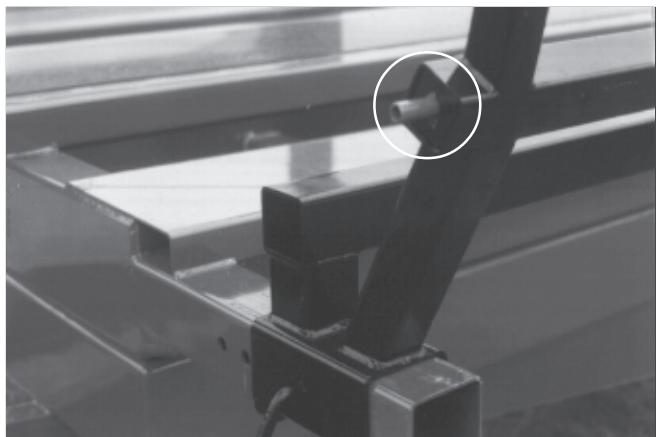

Figure 18

- 1) First familiarize yourself with the controls and their functions. (Figure 16)
- 2) Remember that the Round Bale Handler is designed and built to turn the bales and load them non stop, consequently, the direction of travel will usually be the same as the baler's.
- 3) When ready for the first bale, lower the loading arm to just a few inches above the ground, slow down this is a practice round, line up the machine so that the outer corner of the bale will touch at approximately 1/3 to 1/2 way up the angled part of the outer arm. (Figure 17)

- 4) Raise the loading arm as soon or slightly before the bale reaches the bottom of the "U". (Figure 18)
- 5) Keep raising the bale until it drops onto the platform. Do the same for loading the second row. Then start lowering the loading arm in order to disengage the limit switch (there is a limit switch installed on the machine, preventing the bale ram and the dumping platform from being activated if the loading arm isn't lowered enough). Momentarily actuate the ram control lever (ram switch in the "AUTO" position). The ram will index the two bales toward the rear and will automatically return to the front position.

- 6) Once accustomed to the machine and its operation, you will notice that by slightly altering the alignment of the bale relative to the outside loading arm, you will be able to turn it and load it much more rapidly. In this case, the bale should hit the loading arm slightly closer to the heel.

Figure 19

Figure 20

Figure 21

Models P-6812 & P-6816 only.

- 7) When the first pair of bales loaded reach the bale supports at the extreme rear end of the platform, an indicator will pop out on the front corner of the platform opposite from the loading arm. (Figure 19)
- 8) To unload the bales, simply back up to the area where you wish to deposit the bales, open up the loading arm slightly to clear the platform. Raise the platform fully, then slowly move forward.

Model P-6808 only.

- 9) The P-6808 model permits to unload 2 stacks of 3 bales high vertically (Fig. 20), by using the vertical forks at rear (Fig. 21) included with the machine. Therefore, the loading capacity is limited to 6 bales (4' long bales).
- 10) To unload in rows on the ground, the rear bale support must be used, which permits maximum capacity load of 8 bales. A maximum angle indicator is installed on the machine. When the yellow pin appears, the ideal unload angle is reached (Fig.22).

Figure 22

MAINTENANCE

The Auto-Load Round Bale Handler is designed to save you energy, time and money, take care of it, protect your investment.

- 1) Wipe off all grease fittings with a clean cloth before adding grease to avoid injecting contaminants.
- 2) Repair or replace damaged grease fittings.
- 3) Lubricate all grease fittings every 20 hours of operation. (Do not forget the Bale Ram, 4 bronze bushings).
- 4) Open, clean and lubricate wheel bearings once a year.
- 5) Check nuts and bolts once a year. If necessary, use torque chart page 40.
- 6) Check all bolts on wheels after the first 5 hours of operation and then every 50 hours.
- 7) Check tire pressure every 50 hours. Adjust according to manufacturer's recommendations indicated on the tires.
- 8) Keep your equipment clean, it is good practice.

STORAGE

- 1) Store the Auto-Load Round Bale Handler in a cool, dry place.
- 2) Keep tires off the ground and cover them if left exposed to the sun.
- 3) Keep all piston rod in the retracted position. This will assure better protection against the elements.
- 4) Clean your Auto-Load Round Bale Handler.
- 5) Thoroughly inspect all parts of the Round Bale Handler. Replace or repair worn or defective parts.
- 6) Touch-up or repaint if necessary.
- 7) Lubricate all points before storage.
